SAMPLE COVER

Concrete Jungle presents some of the most exciting tropical houses and tells the surprising story of tropical modernist architecture.

The clash of rational architecture with the organic lushness of tropical vegetation has created some of the most visionary and futuristic buildings we know. Based on the concepts of Modernist style and Bauhaus aesthetics, tropical countries like Brazil or Mexico have developed their highly unique visions of an international style and an architecture both timeless and desirable that continues to be highly influential around the globe.

In Concrete Jungle we embark on a journey through the works of architects influenced by the tropical modernist style, from Luis Barragán to Paulo Mendes da Rocha to Marcio Kogan.

WHAT TO EXPECT

- Profiles of iconic buildings from the 40s–70s including the architect masterminds behind them
- Over 30 projects that span the last two decades and reflect the style traditions
- Essays that give brief insights into the origins of tropical modernism, its regional specifics, and the connectivity between raw material and its natural environment
